math & movement

Comprehensive Package for Elementary Schools

Aligns With Your State Standards

This comprehensive program will help your school meet math and physical education achievement goals.

Speed learning of math facts • Maximize learning readiness
Reach kinesthetic learners • Support mastery learning • Combat obesity

Children love to move!

Math & Movement employs a kinesthetic and multi-sensory approach to teaching and learning that maximizes learning readiness and supports mastery learning. The math movements increase the overall health of the students. The floor mats allow children to jump and move as they learn, offering a richer variety of learning modalities when practicing (visual, auditory, motor, and kinesthetic).

Why teach through movement?

- 1 Research suggests physical fitness and movement improve academic performance.
- 2 Gross motor development promotes fine motor skills and brain development.
- 3 Including movement in the classroom helps your school meet goals and requirements for physical education programming.
- 4 Math & Movement helps combat obesity while improving retention for mandated assessments.
- 5 Children participate eagerly in these activities, improving classroom management and compliance.

"I have tried all year to get my students to multiply. One week after your workshop, they mastered their 9's!"

Program Length

3 hours of virtual training for an unlimited number of teachers and staff from one elementary school. *You choose the structure: one 3-hour session (recommended) or 1-hour a day for 3 days*
